INCIDENT DESCRIPTION

The insured property experienced significant water damage due to a burst pipe in the second-floor bathroom. The homeowners discovered the leak upon returning from a weekend trip on April 3, 2024 at approximately 6:30 PM. Water had been leaking for an estimated 36-48 hours, causing damage to the second floor bathroom, hallway, and the first floor living room ceiling directly below.

Emergency water mitigation services were called immediately. ServiceMaster arrived at 8:45 PM and began extraction and drying procedures. The burst occurred in a copper supply line feeding the bathroom sink, likely due to a manufacturing defect identified during inspection.
